LINING

All our leotards are fully front lined to give dancers confidence that nothing is visible from under the garment.

Beige lining for color leotards

White — for white leotards

Black — for black leotards

POCKETS FOR CUPS

Some ballerinas prefer using cups, while others — don't. We made pockets, so there's always the possibility of changing cups, adding them, or removing them when needed. Please, note: we do not sell bra cups so you will need to buy them separately.

CONSIDERING ANATOMY

NIKOLAY® ACADEMY

The best teachers know that the key of future success is always in the details. This has become the main reason for collaboration of NIKOLAY® with the worldwide famous ballet schools.

The secret of NIKOLAY® uniform popularity is in its refined form. It's the carefully verified line of the back that allows the teacher to control the correct work of shoulders and neck, the form of hip cut that makes the movement easy, staying on the same place even during the most intensive exercises, and exceptional quality of fabrics.

All leotards are fully front lined and most feature removable bra cup pockets in the lining.

KNITTED WARM-UP

NIKOLAY® knitwear collection was a best seller last year, and we're sure it will be just as popular this year, as we have created another beautiful line and made it even better.

The premium-quality Italian yarn is tested several times before knitting. The quality department carefully checks each garment during production and when finished. The highest quality is approved by professional dancers and happy ballet moms, who admire the durability.

High-technology production processing makes the ready garment soft and not itchy.

Color stays bright after dozens of washing cycles.

The yarn complies with the German, Italian and European Laws regarding the prohibition of the use of toxic substances.

Super comfort is achieved by purl-knitting technique that allows the garment to follow body curvature perfectly.

ECO. The yarn is made by a sustainable factory, which uses innovative dyeing on cones that can achieve 50 % of water saving compared to conventional dyeing. Also the large part of the energy is supplied by the photovoltaic system installed on the roof of the plant.
